

Project Falcon — Launch Report

Summary: Falcon reached 1,017 active users and a 96.2% document-attachment success rate during the Q3 beta.

1. Adoption

Weekly active users grew 34% week-over-week after the beta invite wave. The top three retention drivers were voice mode, document attachments, and custom agent modes.

2. Document attachments

Users attached PDFs, spreadsheets, presentations, and plain-text files directly in chat. The model answered questions over the extracted text, including page counts for PDFs and per-sheet rows for spreadsheets.

Format	Share	Success rate
--------	-------	--------------

PDF	41%	95.8%
-----	-----	-------

DOCX	24%	97.1%
------	-----	-------

XLSX	15%	98.0%
------	-----	-------

PPTX	8%	96.4%
------	----	-------

Plain text	12%	99.2%
------------	-----	-------

The most common failures were legacy .doc / .xls files (rejected with a clear message) and a small number of corrupt PDFs.

3. Known issues

- Very large files (>20 MB) are rejected with an explanatory error.
- Extracted text over 40,000 characters is truncated with a visible note.
- Only one attachment kind (image *or* document) is allowed per message.

4. Next steps

Roll the share-sheet integration to production, add multi-attachment support, and instrument attachment success metrics per format.
